

NUTRACOR 88

During early lactation, dairy cows are often forced to draw on body reserves to satisfy energy requirements. For this reason, the addition of fat sources to the diet, such as NUTRACOR 88 is recommended.

NUTRACOR 88 — CALCIUM SALTS OF LONG CHAIN FATTY ACIDS ENERGY FEED SUPPLEMENT FOR DAIRY COWS

Nutrakor 88 is a calcium salt of long chain fatty acids. It is made from freshly produced palm oil and naturally mined calcium sources.

Nutrakor 88 by passes rumen degradation and is highly digestible in the intestine.

It is an excellent concentrated energy feed supplement for dairy ruminants such as cows and goats

The increase energy provided to dairy cows provided by a product such as Nutracor 88 has been shown to

- Increase milk production
- Increase conception rates
- Improve body condition

Protected fat means no interference with fibre digestion that is associated with unprotected fat.

Using Nutracor 88 will also allow for better formulation of fibre sources which can reduce acidosis, foot problems and stomach displacements.

Feed fat not only for its energy, but because it affects the overall reproductive health and efficiency of the cow!

SPECIFICATIONS	
CRUDE FAT :	84% MIN
MOISTURE :	5% MAX
ASH :	14% MAX
CALCIUM :	8-10%
PROTEIN :	NIL
FIBRE :	NIL
APPEARANCE :	BROWN GRANULES 300 MICRONS TO 3MM

DOSAGE	
Generally calculated to optimize total fat in feed at 6% but may be fed at higher percentages under the professional recommendation of the nutritionist, typically fed up to 500 gm per day	
APPLICATION METHOD	Directly to daily rations
PACKING:	25 kg bags / 900 kg totes
SHELF LIFE :	12 months from date of Production
STORAGE :	Away from direct sunlight Relative humidity < 60%

Highly palatable
